

The life of a memory

How the scaffold decides what to keep: one memory, from birth to eviction.

the rule

$$\text{utility} = \frac{\text{wins} + 1}{\text{uses} + 2}$$

Beta(1,1) posterior over: do episodes citing this memory succeed?

An untested memory sits at 0.5, so it is neither trusted nor pruned.

A memory that keeps losing stops being retrieved before it is ever deleted.

why a bank must forget

A bank that only grows fills its slots with paraphrases. Curation, not accumulation, is what keeps the loop paying off.
